ABSTRACT

Hundreds and thousands of people develop cancer every year. This present paper is about the compilation of Siddha preparations for Yoni puttru (Cervical or vaginal cancer) mentioned in various Siddha text books and also deals about the epidemiological survey of cancer deaths and growing need for studying our drugs are also discussed.

INTRODUCTION

The rapid increase in the global cancer burden represents a real challenge for health systems worldwide. Our ancestors had left us so many privileges to treat various types of cancer by the way of palm manuscripts. In Siddha system cancer is mentioned as– Puttru,

Vippuruthi, Dhurmaangisam, Vansilanthi and so on. The purpose of the study is to create more awareness in this context and motivated research.

The problem of Cancer

In the year 2000, approximately 10 million new cases of cancer were diagnosed and there were 6 million cancer-related deaths. Taken together, 22 million people were living with cancer that had been diagnosed within the previous 5 years. These figures reflect a 22% increase in cancer incidence and mortality in the world in comparison with the year 1990. Cancer is projected to become the leading cause of death worldwide in the year 2010, according to a new edition of the *World Cancer Report* from the International Agency for Research on Cancer. Based on projections, cancer deaths will continue to rise with an estimated 9 million people dying from cancer in 2015 and 11.4 million dying in 2030.

DISCUSSION**The Growing need for anti-cancer drug study**

On a global basis, Cancer is on the rise and is assuming alarming, dimensions. Progressive and disseminated malignant disease has a substantial impact on a cancer patient's quality of life and many cancer treatments may have severe side effects. It has been suggested that these issues could be tackled by subjecting our drugs to scientific validation adopting modern tools. The research will not only assure the efficacy of our drugs but can also lead to formulations for prescription as complementary and also discovery of targeted molecular therapeutics in the reverse pharmacology approach. These steps might open out a huge vision for revelation which in forth coming years will create new fields for thought and research, thus leading to newer and richer developments.

CONCLUSION

Today, world over there is a great deal of interest in Siddha system of medicine a number of articles, reviews, opinions pertaining to the relevance of Siddha medicine have been appearing. One thing is common in these articles is concern about quality, safety and efficacy of Siddha drugs in the modern context of evidence-based medicines. The need for strict quality control, exoneration of toxicity and ensured efficacy had been emphasized. With this exciting possibility as the premise, it is time to truly begin our work on bringing our Siddha Traditional medicine - for Yoni Puttru and create an equitable system of health.
