A LITERARY REVIEW OF KAKKUVAN IRUMAL IN SIDDHA ASPECT

S. Ramya*

Siddha Physician, DRS Siddha Clinic, 10-2 Thirumalainagar, Nallagoundanpalayam, Gobichettipalayam, Erode, 638452.

ABSTRACT
Siddha system of medicine is the most popular in Southern region of India. Ancient saints gave us lot of therapeutic valued drugs to treat various diseases. The curative property of the medicine is higher. It is very much helpful in the management of the diseases. With the help of Siddhar’s guidelines there are a lot of remedies to treat an infective, contagious diseases like Kakkuvan irumal (Whooping cough) where the causative organism is B.pertussis, a Gram negative pleomorphic bacteria. It is also called Pertussis. Internal medicines are very effective and are available in various forms such as karkam, ennai, nei, choornam etc. This present study deals with the diseases nature, etiology, symptoms, Siddha medicines.

KEYWORDS: Kakkuvan irumal, Infective diseases, B.pertussis, Siddha medicines.

INTRODUCTION
Pillar of Siddha system is Agathiyar who is one amongst the eighteen siddhars and the Father of Siddha system of medicine. He mentioned several remedies in Palm leaf manuscripts and are translated as an available classical literary text. Fundamentals are useful in diagnosing the case and various forms of medicines are used to treat and manage the diseases condition. Kayakarpam, asanas, rasavatham, ull marunthu, veli marunthu are the categories of this system. In our classical text kakkuvan irumal is mentioned as one of the infective and contagious diseases. In pre-vaccination era 100 to 200 cases are affected in 10,000 populations. 300000 deaths are estimated out of 30 to 50 million population worldwide. According to WHO 687000 deaths are prevented by vaccinating globally in the year 2008. Vaccination is must and it is put in a three booster doses so it develops the required immunity to fight against the infection.
Nature of Diseases\textsuperscript{[4]}

1. Cough with a kind of spasmodic pain,
2. Sometimes ejection of the content of stomach forcibly,
3. An infective diseases affects the respiratory tract (bronchial tube),
4. It is communicated from one person to another easily (contagious).
5. It produces a typical whoop sound (\textit{kok-kok}) while coughing due to entry of external entry of environmental air.

3. Production of typical sound (whoop).
4. Increased recurrence of cough.
5. Difficulty in breathing.
6. Sometimes sputum with blood are spitted out.
7. Incontinence of urine and feces.
8. Protruding of the eyes.

Siddha Treatment\textsuperscript{[4,5,6]}

For severe cough: Valamburikaai bark of the root (Helicteres isora) are powdered and equal ratio of sugar is added.

For cough: Nanjaruppan (Tylophora indiaca) leaf 3-4 are taken and juice is extracted and given.

If wheeze, fever, irritation of throat is present: Karunthulasi ilai (Ocimum sanctum) is administrated.

For wheeze with cough: Prepare kudineer with coffee seeds.

For whoop: Mix 100mg of camphor in egg white.

For recurrent cough: Fumigation of puli koluppu.

Cough due to irritation: Thavasu murungai ilai (Rungia prviflora) juice 15 ml daily twice.

Cough with cold: Ash of Sola sakkai (sorghum vulgare) is mixed with sotruppu.

Adathodai mnapagu: Give 2 gm of manapagu thrice in a day time and thrice in night time.

Pittu: Iluppai ilai (Madhuca longifolia) is triturated with lemon juice made into a balls and it is boiled in an earthen pot covered with a white cotton cloth and allowed to boil. Then juice is extracted and administrated.

Oomathai vithai pudam: Oomathai seeds(Datura metal) are removed and hallowed it is filled with salt made into a seelai mann then it is triturated and mixed with powder of (Terminalia chebula) 4.4 gm is given.

Choornam 1: Ash of peacock feather, milagu (Piper nigrum) ash both are taken in an equal ratio and kalarchi alavu given in cow’s ghee.
Karkam 1: *Mudakatran ilai* (cardiospermum helicabacum) is mixed with cow’s milk of 675 ml with crushed stalk removed garlic for 3 days.

Karkam 2: Root of *vattakilukiupai* (crotalaria retusa), *agathi paluppu* (Sesbania grandiflora) it is triturated in *neerakaram*.

Karkam 3

*Semmulli* (Amarauthus spinous).
*Thoothuvalai* (Solanum trilobatum).
*Thuasi* (ocimum sanctum).
*Thippili* (Piper longum).

It is triturated with *thulas* leaf juice for 3 days.

Karkam 4

*Sikaikai* (Acacia sinuate).
*Naayuruvi* (Achyranthes aspera).
*Manjal* (Curcuma longa).

It is triturated in *neerragaram*.

Karkam 5

*Kuttivila* (Limonia acidissima).
*Kalipaaku* (Areca catechu).
*Poovanthi pazham* (Sapindus emarginatus).

Triturated with hot water and given for 7 days.

Paanam (Drink): 4gm of *marukozhunthu* juice (Majorana hortensis) mixed with 4gm of honey and given for 3 days daily twice.

Chaaru 1

*Kaliyanamurukam ilai* (Erythrina variegate) 35gm.
*Karunjeerakam* (Nigella sativa) 4gm juices are extracted 4 gm are mixed with 135 mg of *korosanai* (Purified ox gall).

Chaaru 2

*Milagai ilai* juice (Capsicum annum) 5gm is mixed with 10 mg of *kariuppu* (table salt) given once in a day.
Neii

*Thoothuvalai* (Solanum trilotatum) juice 675 mg.

Ghee 335ml.

*Koshta* (Costus speciosus) choornam 45gm.

It is boiled and taken in *kaduku thirai pakkuvam*. 1to 2gm twice a day.

Ennai

Bark of *kondrai* (Cascia fistula).

Bark of *aavarai* (Cassia auriculata).

Root of *thoothuvalai* (Solanum trilotatum).

Rot of *kodikali* (Sarcosemma brevistigma) – each 10gm.

*Vavval* (Scotophilus coromandelianus) – 1.

*Man puzhu* (Earth worm) – 10gm.

All are crushed, mixed with gingley oil and boiled 4.4gm for 7 days.

DISCUSSION
When compared with the pre vaccination era, the occurrence of (Whooping cough) *Kakkuvan irumal* is reduced. To cure such infective diseases compared with other system of medicine Siddha system gives a good result and severity is reduced in a very short period. The above mentioned all the medicines are very useful which gives a permanent solution.

CONCLUSION
I hereby conclude that these drugs act well in case of *Kakkuvan irumal* (Whooping cough) as mentioned in classical pediatric Siddha text book.
